## **Health & Safety at Work Policy**

The health and safety of everybody we come in contact with in the course of our working lives is a matter of paramount importance for all of us. This not only includes our fellow employees but also visitors and contractors who do work for us and members of the public.

It is the duty of the company to provide a safe working environment and safe work equipment for its employees and to lay down procedures which comply with legislation and enable our daily tasks to be completed in a safe and efficient manner.

The company is committed to fulfilling its Health & Safety and Environmental responsibilities.

It is the responsibility of each and every one of us to act in a manner which protects everyone's safety and well-being.

The following training notes are designed to help you understand your responsibilities and provide the information necessary to enable you to work in a way which protects your own safety and the safety of everyone you come into contact with.
